Why buy a GARY'S GARDEN SHED

At Gary's Garden Sheds we pride ourselves in offering the best quality shed on the market at affordable prices.

They are built to last using thicker gauge steel than other products on the market. We encourage our customers to come and visit our showroom and inspect our sheds as the quality speaks for itself.

Garden Shed Specialists

Gary's Garden Sheds is a NZ owned family business which has specialised in garden shed design and installation for 25 years. We are proud to produce a quality NZ made product.

Free Installation

NO installation or construction problems.

We want to make purchasing a shed as easy as possible, so will look after you through the whole process. Once we have helped you choose the right design for your site our experienced shed builders will take care of the installation – easy.

**Free installation is only on a flat Auckland site. There is a surcharge for out of area and sloping sites.*

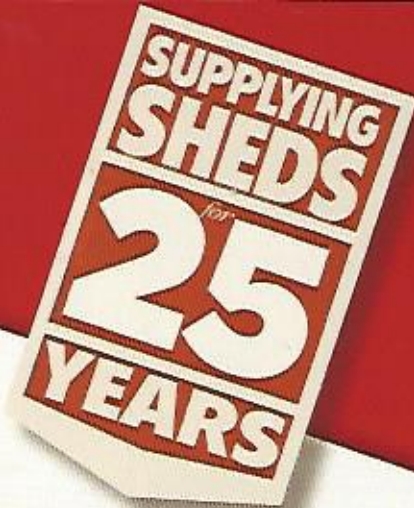

Custom Made

Each shed is custom made to your specifications allowing you to get exactly what you want. We will help you choose the colours, window and door placement, roof types and other optional extras if required.

Warranty

Our sheds are built to last using quality products and a proven design therefore we are happy to offer a 15 year warranty on our Colorsteel cladding.

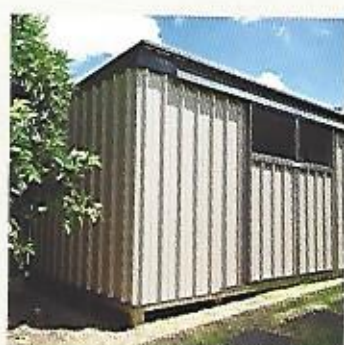

Roofing

Depending on the size of the shed we have two types of roofs – Lean-to or Gable.

Lean-to styles are available on small to large sheds up to a maximum depth of 2.2m. Lean-tos slope towards the back and have a gutter running along the back length. The slope can be reversed if required.

Gable roofs are available on our medium to large sheds and have the gutters running along both low sides.

Colours

Our sheds come in either **two toned** or **all-in-one** colours. Choose the cladding from our large range of Endura Colorsteel colours (listed on opposite page). Next choose a trim colour, usually Ironsand or Karaka however please speak to us about other trim options if required. We are happy to help recommend a colour to match your chosen cladding.

Specifications:

- We use roofing quality NZ Colorsteel for extra strength and durability.
- Our floors are 18mm treated plywood built on 4'x2' H4 treated bearers.
- Great colour range of NZ Colorsteel to choose from.
- Established and proven product of over 25 years.
- Folded corners and guttering provide extra strength and ensure weather proofing.
- Doors are fitted with ability to add a padlock for security (padlock not supplied).
- No council consents are required for our standard sizes.
- Choose from our optional extras: windows, double doors, extra height, workbench and toolboard.
- Secure storage for sports clubs, kindergartens and schools.

Base/Flooring

Your shed can be built directly onto lawn, concrete or decking. Our installers will make sure the shed is secured and level on your site using H4 treated timber and 18mm plywood flooring. The NZ Colorsteel cladding falls below the floor level into a steel channel which is wrapped around the base of the shed ensuring that the shed stays watertight and secure.

No preparation is required other than providing us with a cleared site which saves you time and money. The timber base allows for flexibility to relocate if required at a future date.

We allow for a slight fall on your site however for very sloped sites there might be a surcharge due to extra foundation work required, we are always happy to discuss your site requirements.

**Sloped site*

Features

Some of the design features below highlight just some of the reasons that make a Gary's Garden Shed a premium quality product.

Folded heavy gauge channel, riveted for strength and durability.

Tanalised 18mm plywood floor with H4 treated bearers.

NZ Endura Colorsteel offers extreme strength for NZ harsh conditions.

Doors slide on the outside of shed to allow more storage inside.

High tensile steel with 30mm ridge cladding offers exceptional strength.

All our sheds have folded steel gutters to control water flow.
